

In the Claims

1. (Currently amended) Stretch film comprising a base consisting of a film material;
a multitude of holes, said holes being formed in the base in several rows
extending in parallel to each other and in a main direction; further comprising
at least one layer of strips consisting of a film material and extending in the main
direction wherein at least one layer of strips is attached to the base between the rows of
holes, said at least one layer of strips being devoid of said holes;
wherein the width of at least a part of the strips extending in transverse direction
in relation to the main direction is dimensioned such that the strips each reach up to the
rows of holes adjacent to said strips;
wherein the strips are generally even, but at least without wrinkles; and
wherein each hole is surrounded by a bead having a thickness that exceeds a
thickness of the base.
2. (Canceled)
3. (Original) Stretch film according to Claim 1, wherein several layers of strips are
attached to the base one above the other and that the strips that are arranged one
above the other each comprise the same width.
4. (Canceled)
5. (Original) Stretch film according to Claim 1, wherein the strips are attached to the
base or the associated strip carrying said strips by adhesion.
6. (Original) Stretch film according to Claim 1, wherein the strips are applied without
sealing or bonding.

7. (Original) Stretch film according to Claim 1, wherein the holes can be made by
utilizing a thermal irradiation method without touching the base.
8. (Canceled)
9. (Original) Stretch film according to Claim 1, wherein the holes of neighboring rows
of holes are staggered in relation to the main direction.
10. (Original) Stretch film according to Claim 1, wherein the base is prestretched
together with the strips.
11. (New) Stretch film according to Claim 1, wherein the width of each row of holes
is equal to the diameter of said holes.
12. (New) Stretch film according to Claim 1, wherein a single row of holes is located
between said at least one layer of strips, wherein said holes in each of said rows are
aligned linearly.
13. (New) Stretch film comprising:
 - a base comprising stretchable plastic material and having a thickness;
 - a multitude of base holes in said base, said base holes being formed in the base in
several rows extending in parallel to each other and in a main direction, said respective
base holes being surrounded by a bead having a thickness exceeding the thickness of said
base;
 - at least one layer of strips made of a film material and extending in the main
direction along said base, wherein said at least one layer of strips is attached to the base
between the rows of base holes, said at least one layer of strips being devoid of holes in
said respective strips;

wherein the width of at least a part of the strips extending in transverse direction in relation to the main direction is dimensioned such that the strips each reach up to the rows of base holes adjacent to said strips;

said strips abutting said base evenly and being devoid of wrinkles and curls for enabling said strips to spread stresses developed in said film material when said film material is stretched to prevent tears from developing and spreading.
